Thanks David...closely tracks my notes; we are seeing if we can get an update out this evening. (7:00 am latest).

Field update: LDEQ cannot staff their mobil lab past 10:00 this evening. We agreed to take over air sampling with that equipment from 10:00 to 8:00 am.

In addition to info below, we will get permanent monitor locations, and proximity of residences and sensitive businesses (e.g. Nursing homes).

Was able to touch base with Wren, and Ivan; and alert John and Steve Thompson. We'll get a report back from John Martin this evening.

Oh...confirmed that the place was a 'High Risk' major source RMP facility due to the amount of chemicals stored.

Carl – Here is my list

Is this facility a High Risk Facility under RMP?  
What is the closest community (demographics), school and hospital?  
What was the cause?  
What is the enforcement history? Need write up summary  
Why was the facility inspected in 2011?  
What does air monitoring data show? News reports say no problem.  
RMP – What did the plan say? Offsite consequence report  
LDAR case status?  
How long will they flare?  
What are R6 next steps (plan for next day?)?
